

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in this application.

Listing of Claims:

Claim 1 (Currently Amended): A communication terminal apparatus capable of sending and receiving e-mails comprising:

an input section for entering an e-mail address;

a storage section for storing a plurality of partial e-mail addresses, at least one of the partial e-mail addresses stored in the storage section comprising two or more different e-mail address parts; and

a selection section for selecting one from among the stored partial e-mail addresses;

wherein in entering an e-mail address, a portion of the e-mail address is first entered from the input section and then the partial e-mail address selected from the storage section by the selection section is combined with the portion of the e-mail address entered from the input section to complete the e-mail address entry, and

wherein the plurality of partial e-mail addresses is stored in a predetermined order in the storage section, the selection section retrieves the partial e-mail addresses stored in the storage section in that order to select one from there among, and the order in which the selection section retrieves the partial e-mail address can be arbitrarily specified.

Claim 2 (Canceled).

Claim 3 (Previously Presented): The communication terminal apparatus of claim 1, wherein the plurality of partial e-mail addresses stored in the storage section is classified into predetermined categories, and selection from among the stored partial e-mail addresses is carried out in response to selection of one from among the predetermined categories.

Claims 4 and 5 (Canceled).

Claim 6 (Currently Amended): The communication terminal of claim 1 [[5]], wherein the partial e-mail addresses stored in the storage section are organized into categories.

Claim 7 (Previously Presented): The communication terminal of claim 6, wherein the categories include a category for partial e-mail addresses comprising a top-level domain name and a sub-level domain name.

Claim 8 (Previously Presented): The communication terminal of claim 6, wherein the selection section comprises one or more keys usable to select one of the categories.

Claim 9 (Currently Amended): The communication terminal of claim 1 [[5]], wherein the selection section comprises one or more keys usable to step forward and backward through the partial e-mail addresses.

Claim 10 (Currently Amended): The communication terminal of claim 1 [[5]], embodied as a mobile telephone.

Claim 11 (Currently Amended): The communication terminal of claim 1 [[5]], embodied as a facsimile apparatus.

Claim 12 (Canceled).

Claim 13 (Currently Amended): The communication terminal of claim 21 [[12]], wherein the one or more e-mail address parts is input character by character using the input section keypad.

Claim 14 (Currently Amended): The communication terminal of claim 21 [[12]], wherein the partial e-mail addresses stored in the storage section are organized into categories.

Claim 15 (Previously Presented): The communication terminal of claim 14, wherein the categories include a category for partial e-mail addresses comprising a top-level domain name and a sub-level domain name.

Claim 16 (Currently Amended): The communication terminal of claim 14, wherein the input section ~~keypad~~ comprises one or more keys for selecting one of the categories.

Claim 17 (Currently Amended): The communication terminal of claim 21 [[12]], wherein the input section ~~keypad~~ comprises one or more keys for stepping forward and backward through the partial e-mail addresses.

Claim 18 (Currently Amended): The communication terminal of claim 21 [[12]], wherein the one or more partial e-mail addresses each comprises at least a top-level domain name and a sub-level domain name.

Claim 19 (Currently Amended): The communication terminal of claim 21 [[12]], embodied as a mobile telephone.

Claim 20 (Currently Amended): The communication terminal of claim 21 [[12]], embodied as a facsimile apparatus.

Claim 21 (Previously Presented): A communication terminal apparatus capable of sending and receiving e-mails comprising:

an input section for entering an e-mail address;

a storage section for storing a plurality of partial e-mail addresses, wherein the storage section is configured so that one of the stored partial e-mail addresses can be the same as one or more of the e-mail address parts of another one of the stored partial e-mail addresses; and

a selection section for selecting one from among the stored partial e-mail addresses;

wherein in entering an e-mail address, a portion of the e-mail address is first entered from the input section and then the partial e-mail address selected from the storage section by the selection section is combined with the portion of the e-mail address entered from the input section to complete the e-mail address entry.
